

Pulsation cleaning of dust collector

[<-Back](#)

Description

The main purpose of this preventive operations is to reduce the amount of dust that is infiltrated in the filters. This enhance the life of the filter and the life of the dust collector system as well.

If you purchased the Inovatech Engineering Corp. Dust Collector, these steps are not necessary.

Frequency

This operation should be done on a daily basis.

Location

Step 1: Turn the power off the dust collector and shut down the two ventilation gates, as shown in the image below.

Step 2: Switch the dust collector system from AUTO to the off position.

Step 3: Turn On (Dust Collector). Wait 15 min, then start back the system to it's operational state.
